## Your benefits at a glance

### Perfect roller conditioner

- Driven by a drive belt on the bottom roller (1000 rpm) with a chain drive to the top roller.
- The upper roller is height adjustable.
- The gap between the rollers is adjustable.
- The conditioner pressure can be adjusted on both sides via coil spring adjusters.
- The robust central tube of the roller has a diameter of 5.51' / 140 mm and a wall thickness of 5.6 mm.
- The polyurethane roller profile has an external diameter of 7.87' / 200 mm is vulcanised onto the central steel tube. The segments also cannot twist.
- The conditioner profiles are harder than rubber and therefore wear rates are reduced.
- The stub shafts of the roller are bolted and therefore easy to replace if necessary.
- Chain lubrication via oil pump (lubricates when lifting at headlands).

## Trailed disc mowers with cross conveyor belt

The new trailed disc mowers with roller-type conditioners and cross conveyor belts are unique on the market. The two conditioning rollers and additional accelerator roller ensure optimum crop flow onto the cross-conveyor belt.

Pöttinger guarantees 100% forage transfer to the conveyor belt, regardless of the crop and operating conditions.
